TRANSACTION VALUE ENABLED (TVE)

\$24.05 Trillion

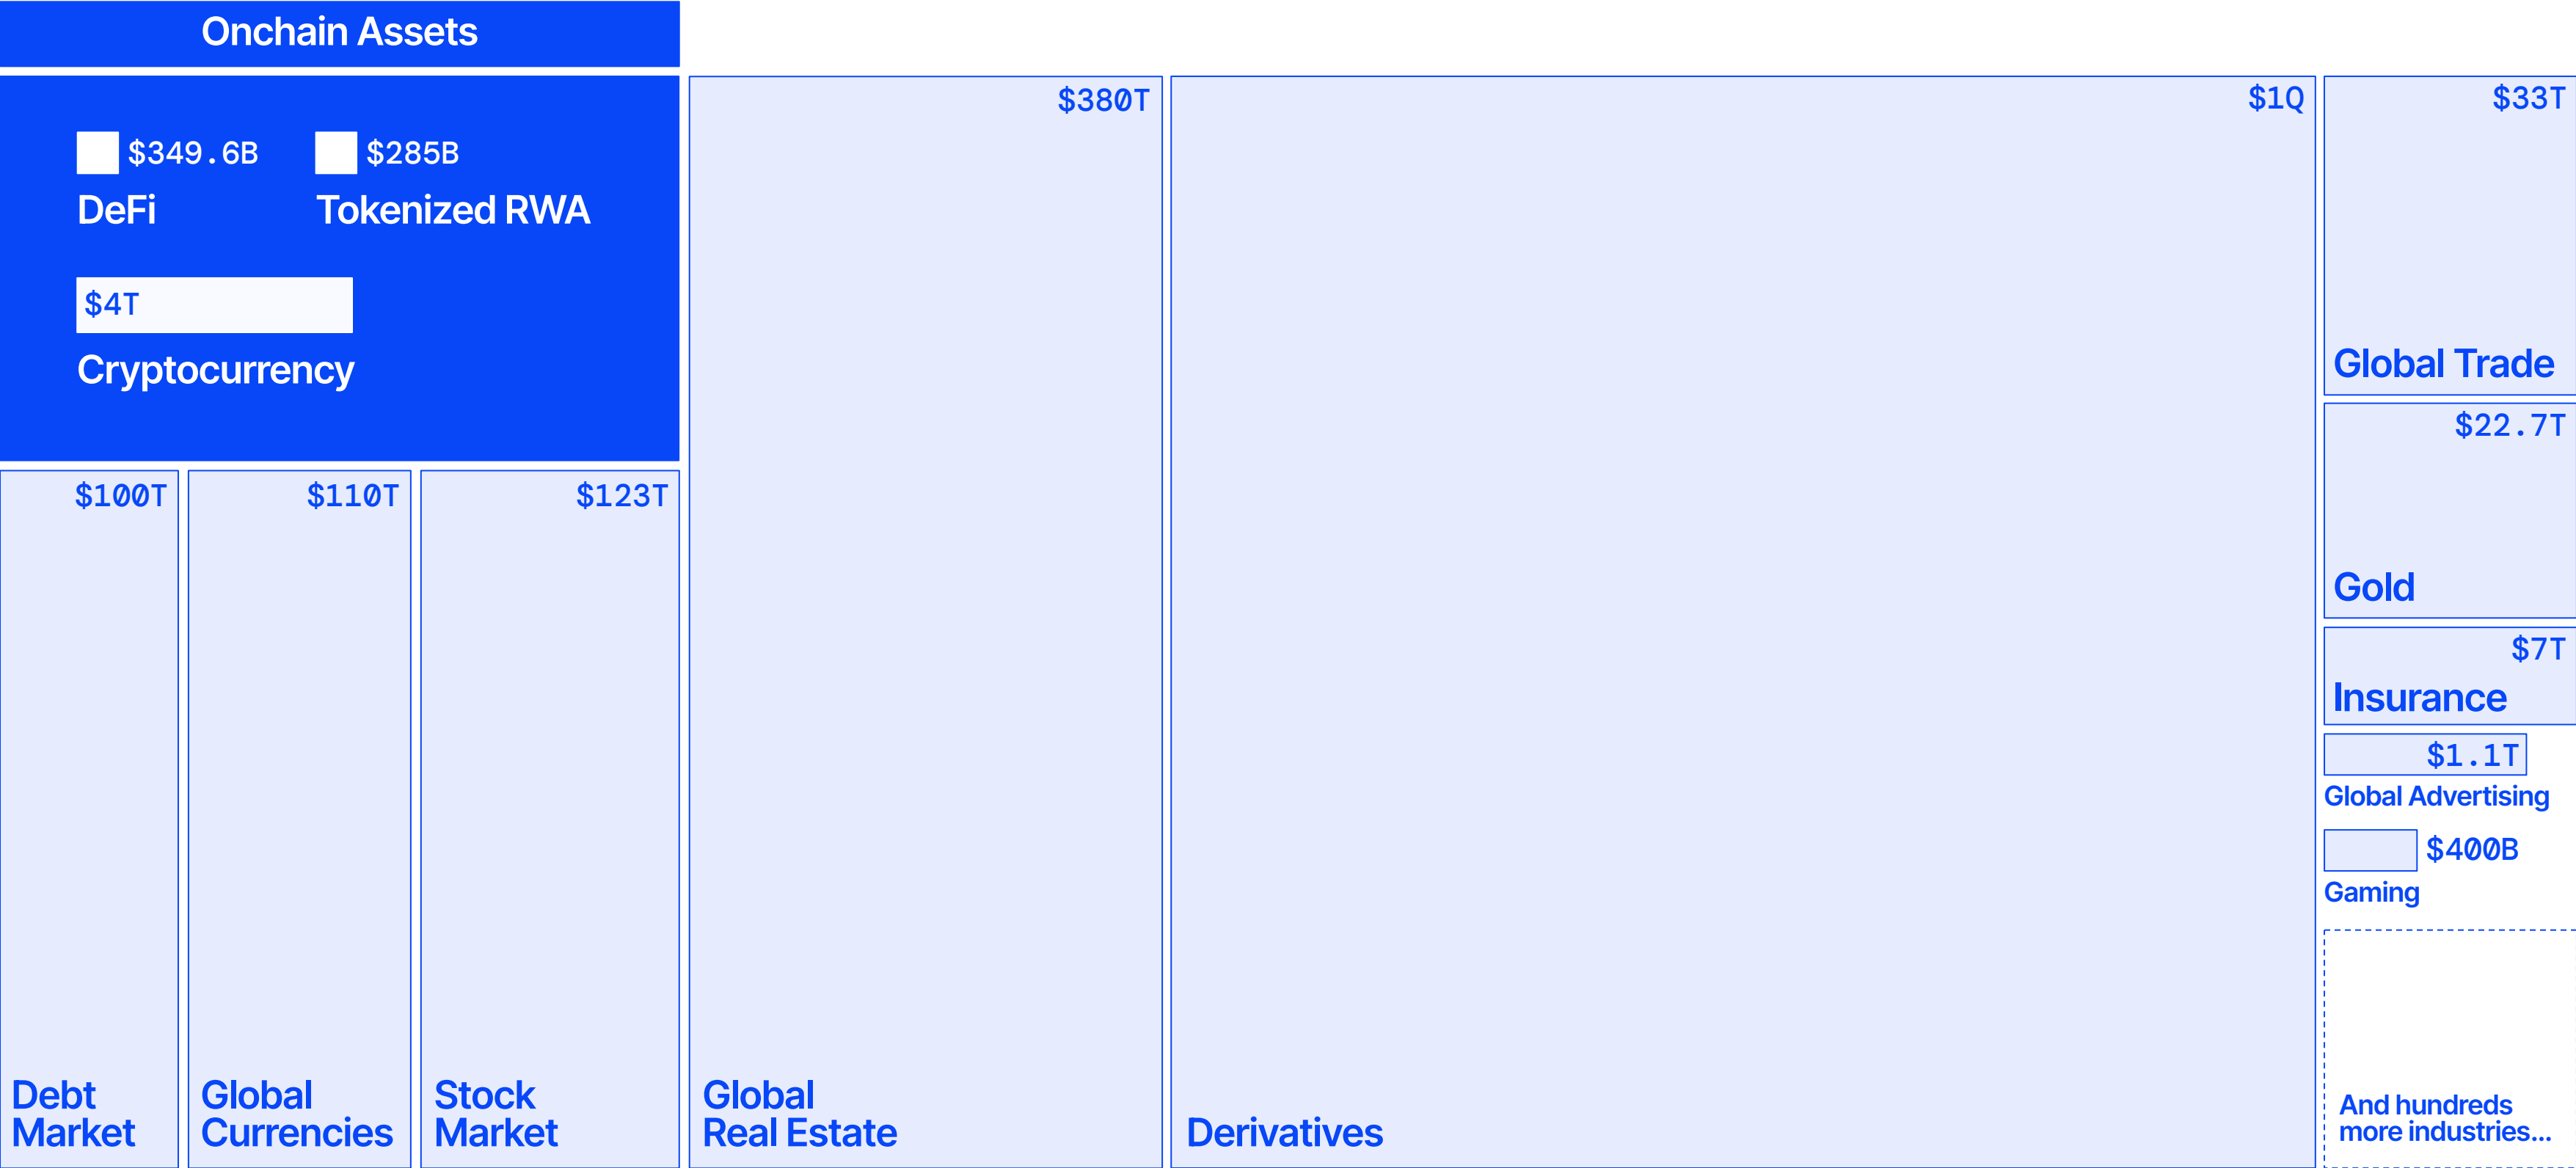

Cumulative Transaction Value Enabled

-     
-     
-      
-      
-     
-      + HUNDREDS MORE

TVE is calculated by taking the sum of the USD value associated with each transaction utilizing a Chainlink oracle

The Chainlink Stack: Standards, Services and End-to-end Solutions

Enabling Next Generation Tokenized Funds for UBS and SBI

- Investors submit subscription or redemption orders for UBS's tokenized fund through SBI Digital
- Orders are sent to the Digital Transfer Agent Smart Contract and held in pending status
- Fund Administrator calculates and validates the fund's NAV for the dealing cycle
- Chainlink securely delivers the validated NAV data to the Digital Transfer Agent Smart Contract
- Digital Transfer Agent (DTA) smart contract calculates required token amounts based on NAV and updates order status inside of smart contract
- Digital Transfer Agent (DTA) uses Chainlink CCIP to trigger validated minting/burning by the tokenized fund contract, possibly across various chains
- Fund Contract mint/burns tokens and SBI Digital Market allocates shares to investors in backend
- Throughout the entire process, UBS maintains complete visibility of all fund operations through Chainlink's oracle network, which provides real-time data flows between their traditional systems and the blockchain-based Digital Transfer Agent - enabling seamless integration of this new tokenized fund service into their existing infrastructure
